

Orthodontic Aligners Training Course

"FAS: Paradigm shift in the Aligners Era,"

Milan (Italy), 17-18th May 2024

The course language will be English
(simultaneous translation into Italian)

ECM Credits
for Italian doctors

Dr. Domingo Martin

Dr. Alberto Canabez

Dr. Giorgio Iodice

Dr. Maria Magallon

The two-day intensive course aims to familiarize attendees with the FAS aligner system, emphasizing its unique features that set it apart from other systems in the market. The course provides detailed guidance on the diagnostic approach using FAS, focusing on vertical, sagittal, and transverse relationships in both diagnosis and treatment planning. Participants will receive comprehensive instruction on initiating, planning, and executing a clinical case with FAS aligners, covering every aspect from portal insertion to the final phase. During the course, attendees will learn how to handle routine diagnostic records as well as advanced ones, including CBCT scans and the recording of closure arches and mandibular dynamics. The course

delves into treatment planning techniques, emphasizing efficiency and predictability, and addresses topics such as anchoring management, staging analysis, and optimization methods. The course thoroughly explores various protocols, enabling participants to master the management of diverse malocclusions and handle a wide range of clinical scenarios effectively. By the end of the course, participants will have the skills and knowledge to manage complex clinical cases using aligners, employing hybrid approaches and integrating skeletal anchoring and advanced clinical procedures for optimal results.

Dr. Domingo Martin

B.A. University of Southern California.
M.D. University of Basque Country
D.D.S. University of Basque Country
M.S. in Orthodontics University of Valencia
Diploma For Functional Occlusion - Roth Williams Center 1991-1993 San Francisco California
